

MIR1350

Mobile Industrial Robots (MIR) is a Danish manufacturer of mobile robots used for the automatic handling of loads in closed areas. They are widely used in various industries around the world. Their programming is very simple and can be performed on any computer, tablet or phone. Built-in sensors, together with advanced analysis and control functions, ensure high safety and high work autonomy. MIR1350 is the largest robot by MIR. It is perfect for moving heavy pallets and other loads. It can be extended with various accessories, including collaborative robotic arms. The robot is available with an optional docking station.
