

FANUC ER-4iA training station

The FANUC Educational Cell is designed for learning how to program industrial robots. It's a ready-to-use solution, ideal for future engineers and robotics professionals. The package includes a FANUC ER-4iA robot, a dedicated training cell, educational applications, and simulation software tailored for students. A key component of the FANUC Educational Package is a five-day training course held at FANUC's headquarters in Wrocław, where participants gain essential knowledge on robot programming. With the academic version of the ROBOGUIDE simulation software, we also provide comprehensive teaching materials and exercise sets, enabling quick and effective integration into educational programs. The FANUC ER-4iA Educational Package is a complete, plug-and-play solution for hands-on robotics training—no additional setup required.
