

MIR MC600 – cobot mobile for industry

The MC600 from Mobile Industrial Robots is a mobile cobot designed for industrial applications. The combination of the world's most popular cobot arm brand – Universal Robots – with MIR's intelligent mobile platforms opens up new application fields for robotic systems. These include: Smart warehouses Operation of multiple CNC machines Fast material transport along production lines Mobile manipulators represent one of the most promising directions in robotics development. This is an example of a purely industrial solution that schools and universities can implement in their laboratories to develop algorithms and test new applications for such systems.
