

FANUC CRX training station

The FANUC CRX training station is designed to support instructors in delivering effective training in the operation and basic programming of collaborative robots. The package includes a FANUC CRX-5iA or CRX-10iA model, equipped with all the necessary features to teach fundamental programming skills. An integral part of the package is a five-day training course held at FANUC's headquarters in Wrocław, during which participants gain essential knowledge about robot programming. In addition, the academic version of the ROBOGUIDE simulation software comes with ready-to-use teaching materials and exercise sets, enabling quick and seamless integration into educational curricula.
